Subject: CLCM Stack Testing

Geoff,

After our conference call yesterday, Ned suggested a great way that CLCM could obtain extra information during the stack testing to identify compounds in the emission stream from the stack. He recommended that the stack test company take grab samples at the exit of the large scrubber stack and analyze those results using a TO-15 analysis. I think taking one grab per run would be appropriate.

Please pass this idea on to your consultants. I will be out of the office Monday – Wednesday of next week.

Thanks,

Alexandra (Sasha) Letuchy
